

Monthly supervision: does internal adaptation add useful fine-scale forecasts?

Validation-selected simple baseline: COARSE_LIFT. Evaluation: April-June 2017. Lower MSE is better.

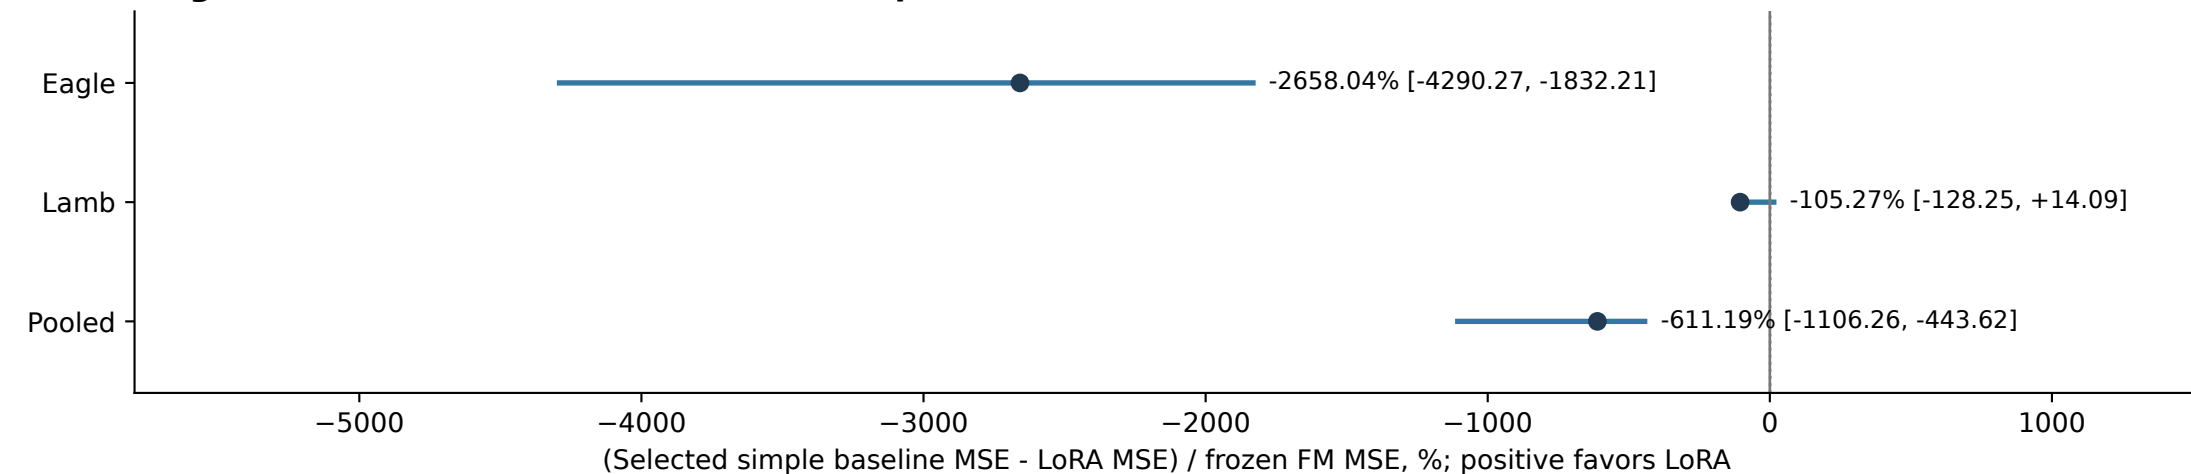

Eagle: 8 targets, 3 forecast months

Lamb: 8 targets, 3 forecast months

Target-cluster 95% intervals (4,000 resamples)

Exploratory standard-LoRA screen, not a new-method claim. Intervals exclude temporal and training-seed uncertainty.

Decision: CLOSE_CURRENT_COARSE_SUPERVISION_SCREEN
