

Does validation choose a worse LoRA learning rate?

$\text{SORT: } 100 \times (\text{score_LORA_V} - \text{score_FIXED_LOW}) / \text{score_F0}$ · positive values mean selection harm

Exploratory reuse of two sources in two time blocks; one stored optimizer seed (12000), not four independent sources.
Selections use original V only. C13 / E83 origins use H48 at a daily stride. QCAL uses C only and gives no coverage guarantee.
CIs condition on saved checkpoints and fixed selectors. Hindsight oracle regret is descriptive and cannot be used for deployment.
