

Every development fit and its selected checkpoint

28 GPU fits shown: 26 adaptations + 2 F0 jobs · 14 retained fits · solid/dashed/dotted = seeds 12000/12001/12002

* / star: retained fit / selected checkpoint; faint lines: unused candidates. Validation uses SORT only. H searched 6 candidates; OFF_LORA searched 3.

Temporal replication on the next 190-day block of the same two sources; no isolated causal mechanism or new-source replication.
 L = 336 h, H = 48 h; daily origins overlap by 24 h. V_select / C_cal: 13 origins each; evaluation: 83 origins. QCAL has no coverage guarantee.
 Each temporal CI conditions on that block's frozen selections and three fitted seeds; it excludes selection/training uncertainty. Blocks 12/13 are not pooled.
